

CLAIMS

1. A substrate processing system comprising:
 - a gas supply source for supplying a process gas containing a reactive
 - 5 substance;
 - a reservoir tank connected to said gas supply source for reserving said process gas;
 - a reactor for exposing a substrate placed therein to said process gas;
 - a first circulation pipe for introducing the process gas inside said reactor
 - 10 into said reservoir tank;
 - a second circulation pipe for introducing at least part of the process gas in said reservoir tank into said reactor; and
 - a flow regulating valve disposed in said second circulation pipe for regulating the amount of process gas to be introduced into said reactor.
- 15 2. The substrate processing system of Claim 1, further comprising a pump for drawing said process gas from said reactor and introducing it into said reservoir tank through said first circulation pipe.
- 20 3. The substrate processing system of Claim 1 or 2, further comprising a second gas supply source for supplying a second process gas to said reactor such that the second process gas bypasses said reservoir tank, said second process gas containing a reactive substance different from that contained in said first process gas.
